

Communication that works

POWERcomms

Prepayment technologies are evolving at a rapid rate and bringing with it the demand for a stable communication infrastructure. This can be a serious challenge for utilities, who are not IT specialists and may not have the necessary personnel available to maintain technologies, methodologies and associated infrastructure.

Key benefits

- > Enables stable communication
- > Conlog manages communication infrastructure
- > Less downtime or offline systems

We see a world where we can all achieve more while using less

We help utilities maximise their service delivery

Our products, solutions and services are simple, efficient and innovative

Keeping your site connected and running

This is where Conlog's POWERcomms product provides the ideal solution. Through our extensive experience and knowledge in the field, we have developed a variety of products that will enable communication for your prepaid infrastructure.

We offer three core products (ADSL-Lite; Managed-ADSL; and Satellite-APN) which ensures that your prepayment project is always up and running.

In addition, part of the package is enabling redundancy protection if, for example, your main communication link should go down for any reason. This is critical because if the communication network is not operating, your consumers are unable to purchase electricity. Therefore, these are just some of the things that Conlog's solution assesses and manages.

Further, once the suitable solution and package has been developed for your needs, Conlog's project engineers will install and configure the system for you. Conlog then manages and resolves any issues relating to the system as the structure is owned and maintained by Conlog's technical specialists.

This ensures peace-of-mind for utilities who are then able to focus on the business of electricity, whilst Conlog focuses on ensuring your structure is operating smoothly and efficiently by managing your prepaid IT infrastructure.
